***SUBJECT: APPROVED ALTERNATE ESCAPE SLIDE LIGHTING TEST SET***

---

**REFERENCE: GOODRICH EVACUATION SYSTEM COMPONENT MAINTENANCE MANUALS**

Goodrich has evaluated and approved the BaseWest Model TS-420 Test Set as an acceptable alternate to the DME Corporation Model TU-14 Test Unit currently specified in Goodrich maintenance manuals for testing escape slide lighting systems. This approval is based upon extensive testing in both production and service center environments at Goodrich. Test inputs, load settings, as well as test limits and ranges specified in Goodrich manuals are common to both test devices and may be used with either.

Goodrich does not recommend one device over the other and will supply either depending upon operator request.

For operators using the BaseWest Model TS-420 Test Set, BaseWest publishes the following documents for use with that device:

Operating and Maintenance Manual, no. 25-60-41  
Calibration Manual, no. 25-60-42

For additional information on this subject, please contact your Goodrich Product Support Representative.
